SUMMARY

Detail-oriented IT Support Technician with experience troubleshooting hardware, software, and network issues. Skilled in technical support, system maintenance, and user support. Knowledgeable in Python, Django, Django REST Framework, AWS, and data analysis. Passionate about solving technical problems, building practical technology solutions, and continuously expanding my skills.

EXPERIENCE

01/2026 – Present
Nairobi

State Department of Economic Planning, IT Support Officer

- Provided first-level technical support by diagnosing and resolving hardware, software, network, and connectivity issues.
- Installed, configured, and maintained desktop computers, laptops, printers, operating systems, and other IT equipment.
- Managed user accounts, passwords, access permissions, and performed routine system maintenance, software updates, and antivirus installations.
- Documented support requests, maintained IT asset inventory, assisted with equipment setup, and provided basic technical support and guidance to users.

10/2024 – 11/2024
Nairobi, Kenya

Ministry Of Labour And Social Protection, Data Collector Enumerator

- Collected, verified, and organized data through field interviews while ensuring accuracy and completeness.
- Conducted surveys by explaining study objectives, interviewing participants, and recording responses according to established procedures.
- Built rapport with participants to encourage accurate and complete responses while maintaining professionalism and confidentiality.
- Submitted completed assignments, maintained daily progress reports, and collaborated with supervisors to meet project deadlines.

05/2022 – 08/2022
Nairobi, Kenya

Kenya Medical Training College, IT Technical Support Intern

- Provided first-line technical support by troubleshooting and resolving hardware, software, and network issues for staff and users.
- Installed, configured, and maintained computers, printers, operating systems, and business applications to ensure reliable performance.
- Performed routine system maintenance, software updates, antivirus installations, and basic IT asset management.
- Managed support requests, prioritized multiple tasks, and escalated complex technical issues to senior IT staff when necessary.
